Targeting a brand-new, potentially high-grade copper-gold system

DRILLING NOW / BERTHA NORTH

Actively drilling up to 6,000 metres at Bertha North, targeting a potential New Afton-style copper-gold discovery.

6,000 m
Up to | fully funded & underway

332 km²
Kolos land package

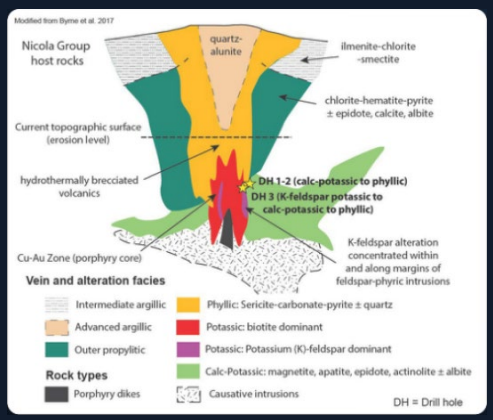

2.4% Cu
Selective intrusive float sample

Holes 7 & 8: Emerging Evidence of a Potential High-Grade New Afton-Style Discovery

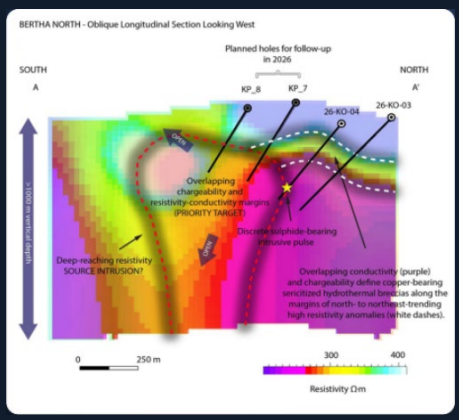

Recent drilling encountered repeated occurrences of copper mineralization, including chalcopyrite and bornite, alongside intrusive phases, alteration and veining. These observations strengthen the interpretation of a structurally controlled system with geological similarities to nearby New Afton Cu-Au mine ~28 km to the north.

Hole 26-KO-07 | 327–327.3 m

New Afton-style model (after Byrne et al., 2017)

Resistivity and planned drill traces

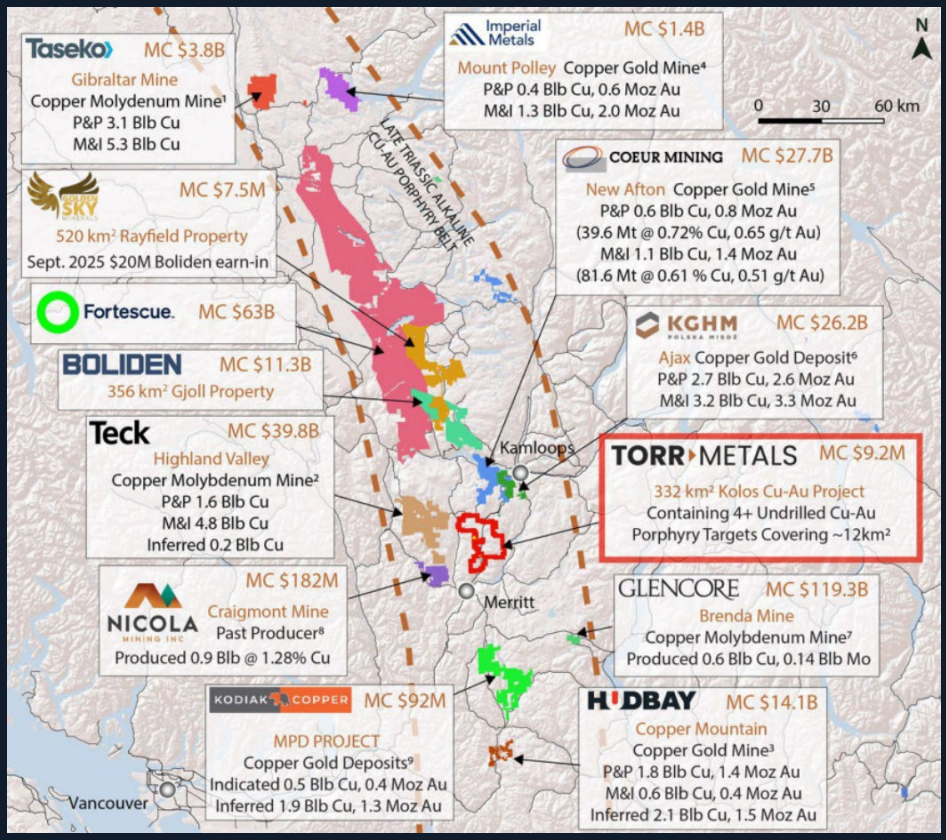

From a deep-reaching oxidized copper system at Bertha to intrusive-associated copper at Bertha North, Torr is testing the potential for a previously unrecognized porphyry centre.

NEXT CATALYSTS **Ongoing drilling / First Phase II assay results expected early December 2026**

Drill observations are visual, not assays; grade, continuity and true widths remain unestablished. Float samples are selective and may not represent underlying mineralization. New Afton comparisons do not establish mineralization at Kolos. See page 2 for disclosure.

A strategic position among copper giants

A new exploration opportunity in a district with established mills and a need for future copper feed.

7 majors
Within 100 km of Kolos

~30 km
Proximity to New Afton and Highland Valley

332 km²
Kolos land package with highway access

Kolos is the largest junior-held land package within ~30 km of two operating mills, with limited nearby alternative feed prospects.

Regional land packages and operations | Source: corporate presentation, p. 6. Nearby-property information has not been verified by Torr's QP.

ADDITIONAL DISCOVERY POTENTIAL

Sonic: ~8 km² soil anomaly | Kirby–Lodi: 24.5 km² hydrothermal footprint
Kova: ~1 km² magnetic anomaly | Filion (Ontario): 60 km gold corridor

CAPITAL SNAPSHOT / OCTOBER 2026

84M shares outstanding | $7M market cap | 12% management ownership

EXPERIENCED MANAGEMENT & DIRECTORS

Malcolm Dorsey
President & CEO
15+ years exploration

John Williamson
Chairman
30+ years mining

Taylor Niezen
CFO
Sprout Sourcing

Gordon Maxwell
Director
~40 years mining

Sean Mager
Director
25+ years mining

Disclosure: Capital figures from presentation p. 4 (Oct. 20 share price basis). Holes 7–8 and strategic claims supplied by management; verify against public disclosure before release. No assurance of discovery, economic grades, mill feed demand or commercial arrangements. Historical and nearby-property data not verified by Torr. Comparisons are not indicative of Kolos mineralization. Plans are forward-looking and subject to exploration, financing, regulatory and operational risks. QP review required before publication. New Afton reference: NI 43-101 technical report, effective Dec. 31, 2024.
