COPPER & GOLD DISCOVERIES AMONG GIANTS**

FORWARD LOOKING STATEMENTS

Certain statements and/or graphics in the Company's press releases, web site information and corporate displays, among others, constitute "forward-looking statements". These statements are based on information currently available to the Company and the Company provides no assurance that actual results will meet management's expectations. Forward-looking statements include estimates and statements that describe the Company's future plans, objectives or goals, including words to the effect that the Company or management expects a stated condition or result to occur. Forward-looking statements may be identified by terms such as "believes", "anticipates", "expects", "estimates", "may", "could", "would", "will", or "plan", or their conditional or future forms. Since forward-looking statements are based on assumptions and address future events and conditions, by their very nature they involve inherent risks and uncertainties. Actual results relating to, among other things, results of exploration, project development, reclamation and capital costs of the Company's mineral properties, and the Company's financial condition and prospects, could differ materially from those currently anticipated in such statements for many reasons such as: changes in general economic conditions and conditions in the financial markets; changes in demand and prices for minerals ; litigation, legislative, environmental and other judicial, regulatory, political and competitive developments; technological and operational difficulties encountered in connection with the activities of the Company; and other matters discussed in this presentation. This list is not exhaustive of the factors that may affect any of the Company's forward-looking statements. These and other factors should be considered carefully and readers should not place undue reliance on the Company's forward-looking statements. The Company does not undertake to update any forward looking statement that may be made from time to time by the Company or on its behalf, except if required to do so by applicable securities laws. You are cautioned not to place any undue reliance on any forward-looking statement.

FORWARD LOOKING STATEMENTS OR INFORMATION RELATED TO EXPLORATION

Relating to exploration, the identification of exploration targets and any implied future investigation of such targets on the basis of specific geological, geochemical and geophysical evidence or trends are future-looking and subject to a variety of possible outcomes which may or may not include the discovery, or extension, or termination of mineralization. Further, areas around known mineralized intersections or surface showings may be marked by wording such as "open", "untested", "possible extension" or "exploration potential" or by symbols such as "?". Such wording or symbols should not be construed as a certainty that mineralization continues or that the character of mineralization (e.g. grade or thickness) will remain consistent from a known and measured data point. The key risks related to exploration in general are that chances of identifying economical reserves are extremely small. The presentation contains historical exploration data that have not been verified by Torr Metals and may not be accurate or complete, and therefore the information should not be relied upon.

Michael Dufresne, M.Sc., P.Geol., P.Geo., an independent director of the Company, also serves as a Technical Advisor and is the Qualified Person, as defined by National Instrument 43-101, responsible for reviewing and approving the technical content of all materials publicly disclosed by Torr, including the contents of this presentation.

POSITIONED FOR **NEW** **DISCOVERY** IN PROVEN MINING DISTRICTS

PRIME LOCATIONS IN TIER-ONE CANADIAN MINING JURISDICTIONS

Road-accessible projects with direct proximity to highways, rail, power and infrastructure

MULTIPLE NEARBY ASSETS HELD BY MAJORS WITH NEAR-TERM NEED FOR MINE FEED

Teck, Hudbay, KGHM, Fortescue, Coeur Mining, Glencore, and Boliden within 100 km of flagship Kolos Project

FLAGSHIP KOLOS CU-AU PROJECT

Near term discovery focus. Located in the Quesnel Trough - Canada's premier copper mining district - with 4 brand new undrilled porphyry targets

FILION GOLD PROJECT

District-scale gold upside never drilled. High-grade gold confirmed within underexplored 60 km structural corridor adjacent to Trans-Canada Highway

DRIILLING NOW: MAIDEN PROGRAM
AT BERTHA NORTH CU-AU TARGET WITH
UP TO 6,000 METRES

Information and comparisons disclosed is not necessarily indicative of precious or base metal endowment or assays on the Kolos Project or valuation of Torr Metals

Malcolm Dorsey, M.Sc., P.Geo
President, CEO & Director

Exploration geologist with 15+ years of experience advancing copper and gold projects from early-stage discovery to resource definition across the Americas. Co-founder of Torr Metals and Torr Resources Corp., with a Master's in Geology and Geophysics from the University of Calgary.

John Williamson, P.Geo
Chairman & Director

Mining executive and investor with 30+ years of experience in founding, financing, and leading public and private exploration and mining companies globally. Recognized for leadership excellence, including TSX Venture 50™ performance awards.

Taylor Niezen
CFO

Partner at Sprout Sourcing specializing in financial strategy and regulatory compliance for public and private companies. Experienced across TSX Venture and North American exchanges, ensuring strong financial governance and execution.

Gordon Maxwell, P.Geo
Director

Geologist with nearly 40 years of global mining experience in senior roles with companies including Noranda, Xstrata, and Glencore. Recipient of the AME BC David Barr Award and PDAC Skookum Jim Award, with ongoing advisory roles in sustainable mining.

Sean Mager, B.Comm
Director

Mining executive with 25+ years of experience across public and private companies, specializing in leadership, finance, and corporate development. Has held senior roles including Founder, President, CEO, COO, and CFO across multiple international ventures.

KOLOS CU-AU PROJECT

WHERE MAJORS ARE MOST CONCENTRATED IN BC

Ongoing consolidation and M&A activity highlights the strategic importance of the district

- **March 2026** - Coeur Mining acquires New Gold including its only copper producing asset (New Afton) for US\$7B
- **September 2025** - Boliden signs \$20M earn-in/JV on the undrilled Rayfield Project

NEAR TERM NEED FOR FEED

- New Afton is expected to be the first major operation to reach end of mine life by 2031
- **Torr's 2025 Bertha discovery is a brand new large copper system in Canada's most active copper district - now fully-funded drilling up to 6,000 metres**

KOLOS HIGHLIGHTS

4+ SHOTS ON GOAL

BERTHA - VECTORIZING TO A PORPHYRY SOURCE

FROM SYSTEM TO SOURCE

- January 2026 - Inaugural phase I drilling (2700 m) confirmed a brand new large structurally-controlled hydrothermal native copper system to **580 m vertical depth**
- Native copper was concentrated along a picrite structural corridor - a **geological setting analogous to the upper supergene zone at the New Afton deposit***
- April 2026 fieldwork confirmed the presence of potassically-altered intrusive units, indicative of the core of a porphyry system, with samples up to **2.4% Cu**
- Current 2026 drill program has confirmed the existence of a brand new large-scale zone of hydrothermal brecciation and multi-stage veining indicative of a porphyry feeder structure

BERTHA NORTH

VECTORIZING TOWARD A NEW-AFTON STYLE SYSTEM

- Current 2026 drilling has outlined a large, vertically extensive hydrothermal system across the first four holes ~1900 m, with multi-stage veining, brecciation, intrusive activity and copper sulphides progressively refining a key geophysical interface indicative of the potential centre of a brand new Cu-Au porphyry. 10

26-KO-04

460.5 m

Fine disseminated and locally fracture-controlled sulphides, principally pyrite $\pm$ chalcopyrite, associated with magnetite and pervasive pale feldspar-carbonate $\pm$ silica alteration

pyrite $\pm$ chalcopyrite

pyrite $\pm$ chalcopyrite

BERTHA NORTH

VECTORIZING TOWARD A NEW-AFTON STYLE SYSTEM

Modified from Byrne et al. 2017

BERTHA NORTH - Oblique Longitudinal Section Looking West

DISTRICT-SCALE +10 KM NORTHERN CORRIDOR UNDRILLED PORPHYRY POTENTIAL

LARGE NW-SE STRUCTURAL
CORRIDOR

GEOLOGICALLY ANALOGOUS
TO NEW AFTON & AJAX*

PARALLELS IRON MASK
STRUCTURE & COMPOSITION

MULTIPLE EPITHERMAL &
PORPHYRY OCCURRENCES

*Information and comparisons disclosed is not necessarily indicative of precious or base metal endowment or assays on the Kolos Project.

SONIC PORPHYRY TARGET ADJACENT TO HIGHWAY 5

~8 KM² MULTI-CENTRE CU-AU SOIL ANOMALY

UP TO 3,090 PPM CU & 420 PPB AU IN SOIL

FERTILE LONG-LIVED INTRUSIVE COMPLEX

ANALOGOUS TO AJAX ~30 KM TO THE NORTHEAST*

*Information and comparisons disclosed is not necessarily indicative of precious or base metal endowment or assays on the Kolos Project.

KIRBY – LODI EXPANDING THE DISCOVERY PIPELINE

LARGE 24.5 KM² HYDROTHERMAL FOOTPRINT

- Comparable scale to the Copper Mountain Mine* ~100 km to the south owned by Hudbay
- Defined by coincident magnetic & resistivity geophysical surveys and geochemical anomalies acquired in 2023
- **Evidence of concealed porphyry core:**
 1. Magnetic destruction with conductive core and resistive halo
 2. Strong alteration zonation supported by pathfinder elements
 3. High-grade rock grab samples from intrusive outcrop up to 0.52% Cu and 4.24 g/t Au supports leakage model on core margins

ADDS STRENGTH TO PROJECT VALUE WITH MULTIPLE OPPORTUNITIES FOR BRAND NEW DISCOVERY
